PREFACE

The Bermuda Digest of Statistics was first produced in 1973. The publication provides an annual summary of various socioeconomic statistics designed for convenient reference. The tables are grouped by theme to form a total of 13 sections. Unless otherwise stated, the statistics are for Bermuda. Some tables from the previous edition have been removed because the data is no longer collected or is now in a different format. Similarly, tables have been modified/ added to this edition to enhance the variety of data provided.

This edition contains analyses and graphs in each section. The aim is to supplement each section of tables by providing background information on the topic and identifying significant trends in the data that go beyond what is shown solely by the tables. The graphs serve as a quick way to determine key trends in a visually appealing way.

The name of the department or organization whose reports or published statements were used is noted under each table. The assistance provided by these organizations is acknowledged gratefully.

The figures in the Digest are mainly annual totals and totals for calendar months. Wherever possible, and space permitting, series have been provided for the period 2002 to 2012. Figures for earlier years may be found in previous editions of the Digest.

Section I

Population

2012 Quick Facts

- Total births: 648
- Total deaths: 422
- Total marriages: 601
- Total divorces: 145

Bermuda's Population Grew Slowly

In 2010, the civilian non-institutional population stood at 64,237 and had increased by 4% since the previous census in 2000. This represents 2 percentage points less growth in the 2010 population than the 6% growth recorded between 1991 and 2000. A combination of trends has led to slowing population growth in Bermuda; namely, declining birth rates, increasing emigration and increased life expectancy. The degree to which a population grows or declines is based on the difference between natural increase (births minus deaths) and net migration (immigration minus emigration). This calculation is known as the 'balancing equation.'

The most recent data available for the population by parish is the 2010 Population and Housing Census. This data indicated that 52% of the population were female and 48% were male which is the same distribution reported in 2000. In terms of race, 60% of the population were black and 40% were white or other races. The most densely populated parish reported in 2010 was Pembroke and the least densely populated was St. George's (Figure 1).

Between 2000 and 2010, the foreign-born population increased by 5%. Although the proportion had declined, the main source of Bermuda's foreign-born population continued to be from the United Kingdom (Figure 2). During the same period, the Bermuda-born population decreased by 3% marking the first time that the Bermuda-born population had fallen between 1950 and 2010.

Bermuda's Ageing Population

Table 1.3 reveals that children under 15 years comprised a smaller proportion (3 percentage points less) of the total population in 2010 than in 2000. The reduction in the youth population during the decade was offset by a 3 percentage point increase in the number of persons 65 years and older due to decreased births and longer life expectancies. In the future, the total population is expected to continue to age as the baby boomers (born between 1946 and 1964) reach retirement age. Bermuda's population pyramid in 2010 illustrates a sex difference in the upper age groups which is indicative of longer life expectancies for females (Figure 3).

Number of Births Declines

There was a downward trend in the number of live births since 2008 (Figure 4). The factors that contributed to this decline could be determined through further study. Throughout the period, births ranged from 859 in 2007 to a record low of 648 in 2012. The sharpest decline of 99 births occurred between the year 2010 and 2011.

Table 1.7 shows that the majority of babies were born to mothers who were between the ages of 30-34 years. An analysis of births by natal status, however, indicated that more than half of babies were born in wedlock and most of their mothers were between 30-34 years old. In contrast, mothers who had their babies out of wedlock were younger and concentrated in the 25-29 age group.

Deaths Fluctuate

The number of deaths fluctuated over the period and declined by 5% from 2008 to 2012 (Figure 4). Three-quarters of Bermuda's deaths occurred in the 65 year and over age group

(Table I.15). Although there were more females in the population, there were more male deaths. This can be attributed to females having a longer life expectancy than males since males tend to have riskier lifestyles.

Brides Wed Earlier than Grooms

Generally, more than half of the marriages performed in Bermuda were between non-residents who typically combine weddings with honeymoons. Between 2008 and 2012, the total number of marriages fell by 17% (Figure 5). Non-residents comprised two-thirds of this decline.

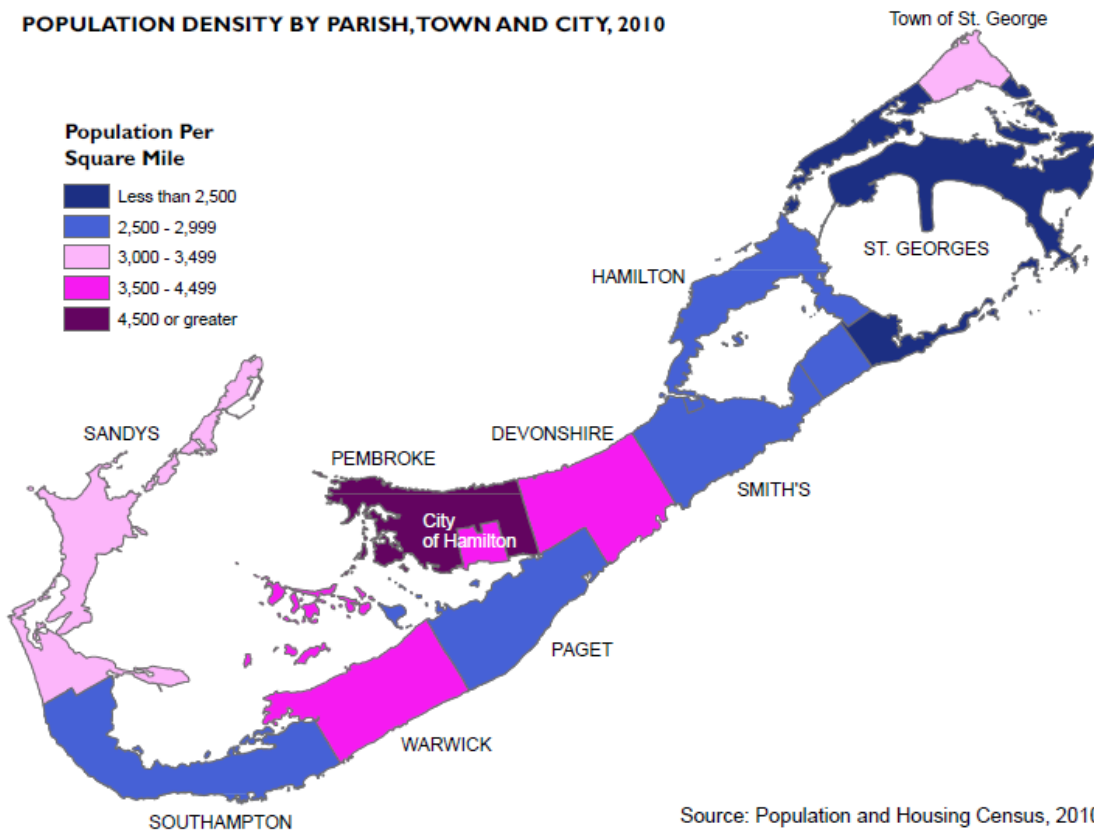

In 2012, brides were more likely to get married at an earlier age (25-29 years) than grooms (30-34 years). The majority of married couples in that year reported that they had never been married at the time of marriage (Table I.8). A comparison of previous marital status by gender indicates that 69% of brides were never married at the time of marriage, in comparison to 64% of grooms.

Unreasonable Behaviour Leading Cause of Divorce

The number of divorces granted decreased by 38% from 2008 to 2012 (Figure 5). In 2012, the majority of divorces occurred within 5 to 9 years of marriage between persons 25-29 years old who were previously never married. ‘Unreasonable behaviour’ was cited as the leading grounds for divorce (Table I.14).

Section II

Education

2012 Quick Facts

- Total school enrolment: 9,893
- Government schools: 5,338
- Private schools: 3,348
- Bermuda College: 1,207

School Enrolment on the Decline

In Bermuda, it is compulsory for all children aged 5 to 18 years to attend school, unless the requirements for graduation from senior school have been met at an earlier age. Between 2002 and 2012, males were more likely to attend Government schools and females were more likely to attend private schools. Both Government school enrolment and private school enrolment declined from 2002 to 2012, at 15% and 8%, respectively. As students enrolled at tutorial sites (e.g. home schools) and General Education Diploma (GED) programmes are excluded from the enrolment tables, it is possible that an increase in enrolment in alternative learning programmes over the period could be a factor for this reduction. Another possible factor contributing to the decline in enrolment is the emigration of families as a result of the contraction in the job market. Also, a minor contributing factor is the 71 person increase in non-tertiary students studying abroad between the 2000 and 2010 Censuses. This decrease in Government and private school enrolment is also in alignment with population projections which indicate a shrinking of the school-age population during this time period.

Loss of Students from Senior Secondary

Over the decade, secondary school enrolment declined by 7% compared to a 14% and 15% decrease for middle and primary school enrolment, respectively. However, from year to year, there is a significant drop in the number of students who progress from one class year to the next at the secondary school level (Figure 1). This trend holds true for both Government and private schools. The average decline during the period in the number of students from senior level 1 (S1) to senior level 4 (S4) was 34%. This amounts to the loss of 244 students on average between S1 and S4 each year. Some of the possible reasons as to why this may be occurring include: students dropping out, students leaving to study abroad, students emigrating with family members, students leaving to study in non-traditional school settings (e.g. home schools and GED programmes), etc. The degree to which each of these factors, amongst others, are contributing to the exodus of students from S1 to S4 is a potential topic for further study.

Women Outnumber Men 2:1 in Bermuda College Enrolment

Enrolment at the Bermuda College increased by 122% from 2002 to 2012. This may be explained by the fact that in 2008, the Bermuda Government introduced free tuition for Bermudians to attend the Bermuda College. This coincided with annual increases in enrolment from 2008 to 2010. Following the removal of free tuition to a partial subsidy in 2011, enrolment has declined slightly (Table 2.1).

Further analysis of Bermuda College enrolment highlights the growing disparity in the proportion of male and female students. The proportion that are female has increased from 58% in 2002 to 69% in 2012 and has remained at 66% or greater since 2004 (Figure 2). This compares to 52% of the total population that are female. In addition, the gap at the senior secondary school level is much narrower, as 55% of students were female in 2012. The Bermuda College enrolment gap between the genders may be another topic for further investigation.

Ageing Population Leads to Demand for Health Services

Bermuda's population is ageing because residents are living longer and are generally in better health than previous generations. In 1950, life expectancy at birth was 64.85 years and in 2012, it had risen to 79.76 years. As people live longer, they place increasing demands on the health care system in terms of infrastructure requirements, access to health care services and professionals. Together, these factors contribute to rising health care costs.

Continuing Care Unit Near Full Capacity

Bermuda has one general hospital, King Edward VII Memorial Hospital (KEMH), one urgent care centre, Lamb Foggo Urgent Care Centre, and one psychiatric hospital, Mid-Atlantic Wellness Institute (MWI). The general hospital provides three service levels of care – acute care, continuing care and hospice care. Table 3.1 shows that the Continuing Care Unit was near full capacity in 2012 at 97%, as demand for this service remained high over the past ten years. This compares to decade record low occupancies in 2012 for acute care and hospice care of 62% and 54%, respectively.

Therapeutic Services Surges

There was a shift away from operations performed on inpatients towards outpatients during the ten-year period. From 2002/03 to 2011/12, operations performed on inpatients declined by 11% whereas outpatient operations increased by 28%. Computed Axial Tomography (CAT) scans have more than doubled, from 4,363 in 2002/03 to 9,501 in 2011/12. The number of patients undergoing speech language pathology skyrocketed over the past decade due to a change in the reporting methodology from counting patients to counting treatment units. In addition, the number of persons receiving physiotherapy, speech therapy and occupational therapy increased significantly due to increased staffing levels.

Emergency Visits on the Rise

In April 2009, the Bermuda Hospitals Board opened the Lamb Foggo Urgent Care Centre in St. George's. This facility provides limited emergency services on a part-time basis. To assess the demand for emergency services, it is essential to combine the visits at KEMH with the Lamb Foggo Urgent Care Centre. Over the decade, the annual total number of emergency visits has increased by 24%. Emergency visits peaked in 2011/12 at 39,564 visits and 2003/04 had the lowest number of visits (31,469) (Figure 1). The rise in the number of emergency visits may be due to more persons having no health insurance coverage as a result of the economic downturn in the job market. These uninsured persons may have opted to use emergency services instead of private doctors. The extent that the recession is contributing to the increase in emergency visits is a potential area of study.

More Patients are Deinstitutionalized

The psychiatric hospital provides four services: acute care, long-term and rehabilitation, outpatients and Turning Point (detoxification unit). For the ten-year period, 2002/03 to 2011/12, there were little variations in MWI's bed count for acute care, although the bed count for the category of long-term and rehabilitation declined by 41% over the period, from 98 to 58 beds (Table 3.2). This occurred as patients were moved to group homes in the community.

Health Personnel – Leading Occupation are Nurses

The top three health occupations in 2012 were Professional Nurses (516), Doctors, (187) and Physiotherapists & Occupational Therapists (87) (Table 3.3). The number of professional nurses has continued to fall for the third consecutive year and declined by 4% from 2002 to 2012. Conversely, the number of Doctors has increased in recent years, and by 48% over the eleven-year period. The number of Physiotherapists and Occupational Therapists also increased over the period, by 23%.

Deaths of Males Exceed that of Females

The leading causes of death, for both sexes, were circulatory illnesses and neoplasms¹ for the years 2009 and 2010 (Table 3.4). Together, they represented 61% of all deaths recorded. In 2010, more men than women died in each 'cause of death' category; 2009 had the same trend, except for respiratory illnesses. Most of the leading causes of death affected persons 65 years and older. The risk of circulatory diseases is associated with factors such as alcohol consumption, smoking, obesity and lack of regular exercise. The risk of exposure to cancer increases with age. In contrast, deaths attributed to accidents and violence was concentrated primarily among persons aged 25 to 44 years who are more likely to partake in risk-taking behavior.

Chlamydia – Leading Sexually Transmitted Infection

Every year since 2000, more than 500 sexually transmitted infections were reported in Bermuda. Between 2005 and 2012, almost half of these infections occurred among persons aged 20-29 and at least 6 out of 10 infected persons were female (Figure 2). Throughout the period, Chlamydia was the most commonly diagnosed infection and was more prevalent among females than males (Table 3.5). The proportion of males infected ranged from 24% to 32%. Over the 8-year period, 2012 saw the lowest number of reported cases (380) while the highest was in 2007 (540 cases).

Gonococcal infections were the second most commonly reported sexually transmitted infection. From 2005 to 2012, gonococcal infections have fluctuated from a low of 24 in 2009 to a high of 79 cases in 2011. When averaged over the period, 52% of gonococcal infections were reported by men. The proportion of male patients with this disease peaked at 79% in 2009, recording the highest level of gonococcal infections by gender for the period.

¹ A neoplasm is an abnormal mass of tissue that results when cells divide more than they should or do not die when they should. Neoplasms may be benign (not cancer), or malignant (cancer). Also called tumor. *Source: National Cancer Institute, retrieved from <http://www.cancer.gov/dictionary?cdrid=46264>.*

¹As of January 2007, Learning Disability bed count has been reduced to 28 beds, Rehab bed count is 25 and Extended Care is 18 beds. Closed Bayview (12 beds) and Watson (15 beds) wards.

²The length of stay increase over the last year was due to a number of long term patients being discharged from MWI and admitted to KEMH.

2012 Quick Facts

- Crimes Against Property: 2,541
- Crimes Against the Community: 772
- Crimes Against Persons: 677
- Number of Drug Seizures: 531
- Value of Drug Seizures: \$14.62 million

Number of Crimes at Ten Year Low

Between 2003 and 2012, total crime in Bermuda reached its peak in 2008 and then decreased each year until it reached its lowest level in 2012. There was a 28% drop in total crime from 2008 to 2012 and a 9% decline from 2011 to 2012. As indicated by Figure 1, the sharp fall in Crimes Against Property (-36%) from 2008 to 2012 was largely responsible for the reduction in total crime over this period.

Leading Category of Crime is Against Property

Figure 2 shows that Crimes Against Property had the largest share of total crime throughout the decade. However, over time the proportion has decreased from 70% in 2003 to 64% in 2012. As a result, the other two categories of Crimes Against Persons and Crimes Against the Community have each gained 3 percentage points in their share of total crime over the period.

Leading Specific Crime are Residential Burglaries

The three leading specific types of crimes in 2012 were Residential Burglaries, Motor Vehicle Theft and Theft of Property. Combined, these three crimes comprised nearly half (48%) of all crimes. However, the greatest increases from 2011 to 2012 occurred in crimes of Indecency (+29%), Non-Residential Burglaries (+12%) and Anti-Social Behaviour (+6%). On the other hand, Firearm Offenses (-50%), Tourist Accommodation Burglaries (-35%) and Murders (-25%) had the greatest decreases.

More Cannabis Seized than Any Other Drug

Drug seizures decreased 40% from 2011 to 2012 and they most often came from the streets (71%) followed by at port (28%) (Table 4.2). Of the \$14.62 million worth of drugs seized, 81% was from cannabis, followed by cocaine (17%).

Section V

Labour

2012 Quick Facts

- Total Occupied Jobs: 35,443
- Jobs held by Non-Bermudians: 10,311
- Leading Occupations: Service Workers, Shop and Market Sales Workers
- Number of Work Permits: 14,129

Number of Jobs Decline

According to the Employment Survey conducted by the Department of Statistics, there were 35,443 occupied jobs in 2012 (Table 5.1). This figure was down 4,770 jobs (9%) from the year 2008 due to the economic downturn. Of all jobs in 2012, 71% were filled by Bermudians and an equal share (50%) was held by men and women.

Dominant Industrial Sectors

In 2012, the top three industries of employment in Bermuda were Public Administration, International Business Activities and Education, Health and Social Work, respectively (Table 5.1). The Public Administration sector accounted for 4,298 filled jobs in 2012, a modest increase of 14 jobs (0.3%) from the 4,284 jobs reported in 2011. Bermudians were concentrated in the Public Administration, Education, Health and Social Work, and Business Services sectors (Table 5.2). Conversely, their non-Bermudian counterparts were engaged primarily in International Business Activities, Education, Health & Social Work and the Business Services sectors.

An analysis by gender shows that men were concentrated in the Public Administration, Construction and Business Activities sectors, respectively. In contrast, females were employed primarily in Education, Health and Social Work, Public Administration and International Business Activities.

Leading Occupations

Overall, the leading occupations in 2012 were Service Workers, Shop and Market Sales Workers, Professionals and Senior Officials and Managers. Men were concentrated in Senior Officials and Managers, Service Workers, Shop and Market Sales Workers and Craft and Related Trades Workers occupational groups (Table 5.3). In contrast, women were employed primarily as Clerks, Professionals and Service Workers, Shop and Market Sales Workers.

Of persons holding posts within the Armed Forces, Skilled Agricultural and Fishery Workers, and Crafts and Related Trades Workers categories, over 90% were men. More than half of Clerks, Professionals and Service Workers, Shop and Market Sales Workers were women (Figure 2).

Work Permits

Between 2002 and 2007, there was a steady rise in the number of work permits issued (Figure 3). In 2008, after the onset of the economic recession, there was a shift in this trend and total work permits declined until 2010 and rebounded the following year. This fluctuating trend was influenced primarily by the issuance of 3 month work permits and 2 to 5 year work permits (Table 5.7).

Section VI

Prices and Wages

2012 Quick Facts

Annual Rate of Inflation: 2.4%

Annual Change in Selected Average Retail Prices

- Eggs (*1 dozen, large domestic*)
\$4.88 (+7.3%)
- Sugar (*2kg bag, white, granulated*)
\$3.88 (-5.6%)
- Electricity (*monthly per 560 KW hrs*)
\$297.38 (+10.4%)

The Purpose of the CPI

Generally, there tends to be a correlation between prices and wages. Prices affect our daily living in countless ways, from buying groceries to paying bills. Our wages allow us to purchase a selection of preferred goods and services. The Consumer Price Index (CPI) monitors changing prices and is used by a variety of stakeholders. For example, employers and unions use the CPI to negotiate wages and salaries, while home owners use it to adjust rental agreements. Insurance premiums, pensions, alimony and child support are also often tied to movements in the CPI.

The CPI is a measure of changes in the average price of consumer goods and services purchased by households. It is the best economic indicator to determine the effect of changes in retail prices on the average household budget. A rise in the level of prices of goods and services over time is referred to as inflation. The inflation rate is the percentage rate of change in price level over time. The index has been revised four times since it was re-established in Bermuda in 1961, having been discontinued at the end of World War II. The current index is based on a “basket” of goods and services derived from the results of the 2004 Household Expenditure Survey (HES). The basket is due to be updated again shortly after the conduct of the 2013 HES. It is important to update the basket every decade because spending patterns change over time as new items enter the market, such as iPads, Kindles, etc. Bermuda’s CPI basket is comprised of the following nine expenditure categories:

- Food
- Rent
- Clothing and Footwear
- Tobacco and Liquor
- Fuel and Power
- Household Goods, Services and Supplies and Communications
- Transport and Vehicles
- Education, Recreation and Reading
- Health and Personal Care

Fluctuating Annual Inflation Rate

Between 2002 and 2012, Bermuda’s annual inflation rate reached a high of 4.8% in 2008, followed by a low of 1.8% the following year (Figure 1 and Table 6.1). This drop largely occurred as the Fuel & Power and Transport & Vehicle sectors shifted from inflation in 2008 to deflation in 2009. The annual average index for all items in 2002 was 88.3; in 2012 it stood at 119.6, posting an increase of 35%.

Fuel & Power Sector Prices Increase the Most

Figure 2 and Table 6.1 shows that while the annual rate of inflation in 2012 was 2.4%, price changes varied significantly by sector. For example, the Fuel & Power sector led the way with a 9.3% increase, compared to the Rent sector which increased marginally by 0.2%.

¹All rates are quoted as of October 1st of each year, with the exception of the Teachers whose rates are adjusted 1st September of each year.

²This sector comprises a broad range of occupations which include administrative, professional, technical and clerical workers as well as public health nurses and customs officers. The brief descriptions of each grade range attempt to give only a general idea of the job types involved. Users should also note that pay grades attached to some positions may overlap at the margins.

³Teachers and lecturers are placed on the scale according to their qualifications and experience; for nursery, primary, middle and secondary teachers, school size is an additional criterion.

Section VII

Home Finance

2012 Quick Facts

- Government Revenue (*Fiscal year 12/13*):
\$910 million
- Government Expenditure (*Fiscal year 12/13*):
\$1.1 billion
- Registered Companies (*at Dec. 31, 12*):
9,389

Government's Expenditure Exceeds Revenue

For the tenth consecutive year, Bermuda Government's revenue has fallen short of its expenditure (Figure 1). The last time revenue exceeded expenditure was in the 2002/03 fiscal year. In the 2012/13 fiscal year, expenditure was 19% or \$172 million higher than revenue. The primary component of total revenue during the past fiscal year was payroll tax (34%) and wages and salaries were the single largest item of expenditure, comprising 39% of the total.

Bermuda Monetary Authority's Balance Increases Over Decade

From 2002 to 2012, total assets, liabilities, capital and reserves increased by 52%, balancing at \$177.4 million. However, there was a 3% decline from 2011 to 2012. In 2012, securities contributed the most to total assets (54%). On the liabilities, capital and reserves section of the balance sheet, notes and coins in circulation comprised the majority of the total (73%).

Corporation of Hamilton's Expenditure Exceeds Revenue Recently

The Corporation of Hamilton's revenue exceeded expenditure from 2002 to 2007 but fell short of expenditure between 2008 and 2012 (Figure 2). In 2012, expenditure was 14% or \$3 million higher than revenue. One of the factors contributing to the shortfall of revenue in 2012 was the cessation of collecting wharfage fees. The most significant contributor to total revenue in 2012 was taxes (39%) and staff costs were the largest item of expenditure, comprising 35% of the total.

Corporation of St. George Revenue and Expenditure Decline

Figure 3 shows a trend of decreasing revenues and expenditures since 2004 for the Corporation of St. George; revenue declined by 36% and expenditure by 29%. The Corporation of St. George was no longer able to collect wharfage in 2012 due to the introduction of the *Municipalities Reform Bill 2010* (Table 7.4). As a result, the Bermuda Government increased significantly the grants provided to the Corporation in 2012 in an attempt to lessen this impact. However, the increase in grants did not offset the removal of wharfage collection, as revenue fell by 24% from 2011 to 2012. Wharfage had typically been the largest contributor to total revenue, however, this changed in 2012 with government transfers comprising 77% of total revenue.

For the years 2004 to 2007, significant capital outlays were made relating to damage sustained from Hurricane Fabian. These capital outlays stopped in 2008 and contributed to a reduction in total expenditure since (Figure 3). Staff and office expenses were the largest expense item in 2012 at 75% of total expenditure.

Combined Balance Sheets of Commercial Banks and Deposit Companies

The total assets and liabilities of commercial banks and deposit companies increased by 29% from 2002 to 2012. The largest asset item was loans and advances, making up 37% of the total assets. Demand deposits were the most significant contributor to total liabilities, comprising 40% of the total.

Nearly Three Quarters of Companies are Exempted

The majority of businesses in Bermuda were exempted companies at the end of 2012. Between 2006 and 2008, the total number of registered companies increased steadily and then fluctuated during Bermuda’s recessionary period (Figure 4). From 2006 to 2012, the number of registered companies increased by 8% (or 1,384 companies).

Section VIII

National Accounts and Balance of Payments

2012 Quick Facts

- Nominal GDP: \$5.5 billion
- Real GDP: \$4.8 billion
- Nominal GDP % Change: -1.4%
- Real GDP % Change: -4.9%

Nominal GDP Declining

The Gross Domestic Product (GDP) measures the total value of goods and services produced in a country. Nominal GDP uses current (or market) prices (inflation not factored) to value the production of goods and services. Although, Bermuda's nominal GDP increased by 22% from 2004 to 2012, nominal GDP has declined each year since 2008 (Figure 1). This decrease coincides with the start of Bermuda's recession. The three largest contributors to Bermuda's nominal GDP in 2012 were International Business Activity, Real Estate & Renting Activities and Financial Intermediation, representing 25%, 17% and 13% of the total, respectively.

Real GDP Declining

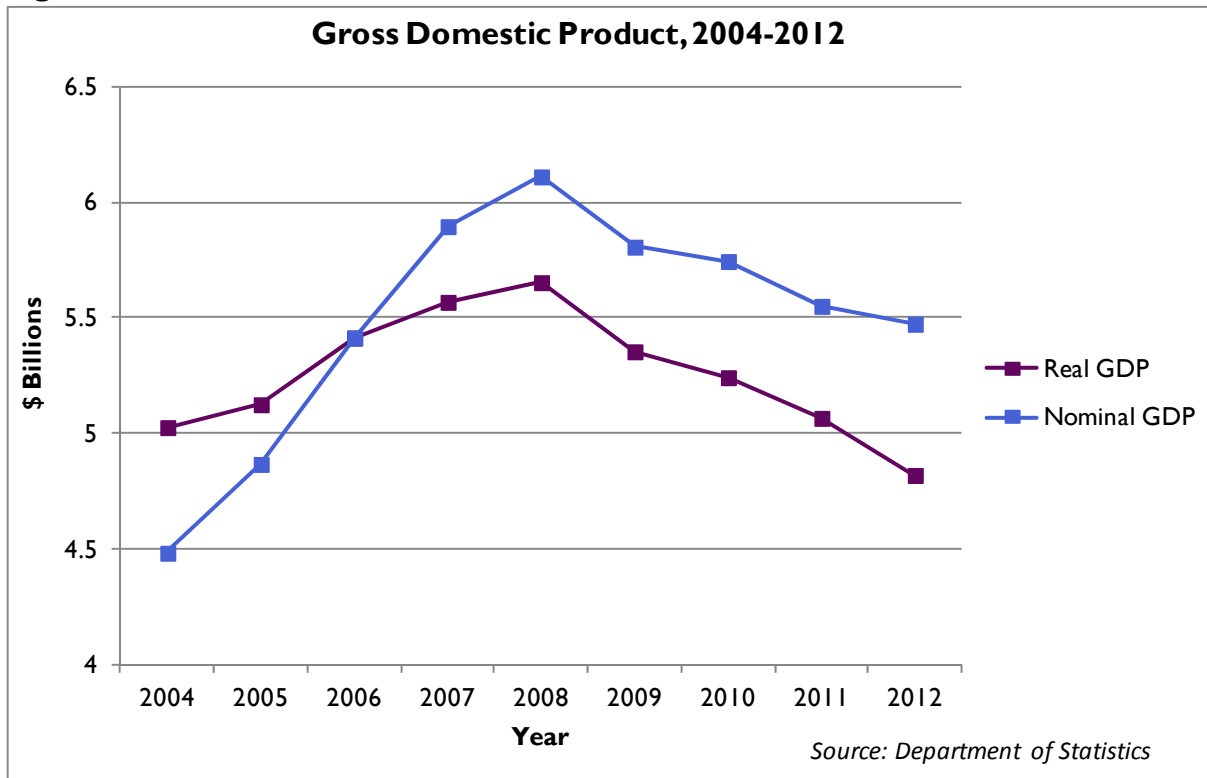

Real GDP uses a constant price level (inflation factored) to value the production of goods and services. Real GDP allows economists to determine whether production of goods and services has increased or decreased without having to consider any change in the purchasing power of the currency. As with nominal GDP, real GDP increased each year from 2004 to 2008 and then declined every year since. Real GDP decreased by 4% over the entire period. As with nominal GDP, International Business Activity, Real Estate & Renting Activities and Financial Intermediation were the most significant components of real GDP in 2012 at 25%, 18% and 13%, respectively.

Balance of Payments – Surplus

The balance of payments measures the surplus or deficit on trade between Bermuda and the rest of the world. It is used to summarize all international economic transactions for Bermuda annually and determines the difference between the value of imports and exports.

Table 8.3 shows that employee compensation was the primary contributor to the balance of payment current account surplus from 2006 to 2012. Employee compensation comprises largely of receipts by residents in the form of wages and salaries from the international business sector. Outflows related to transportation were the main factor that offset the current account surplus.

External Trade

2012 Quick Facts

- Total Imports: \$884.42 million
- Primary Imports: Finished Equipment
- Total Exports: \$16.93 million

Value of Imports Peak in 2007

Bermuda relies heavily on imported products as few goods are manufactured on the island. In fact, the value of the island's exports is only 2% of its imports. Figure 1 illustrates that for the first half of the decade, imports trended upwards followed by a general decline since 2007. In numeric terms, imports increased by 38% from 2003 to 2007 and then declined by 23% from 2007 to 2012. The reduction in imports coincides with the start of Bermuda's recession which resulted in the contraction in the number of filled jobs and increased emigration.

Leading Commodity Group Imported is Finished Equipment

Finished Equipment (e.g. furniture, books, toys, etc.) held the highest share of the total value of imports in 2012 at 32%, followed by Food, Beverages & Tobacco (21%) and Machinery (14%) (Figure 2). In 2003, these were the same three leading categories; however, Food, Beverages & Tobacco (20%) had the greatest share followed by Machinery (17%) and Finished Equipment (15%) (e.g. furniture, jewelry, books, etc.).

Most Imports from the United States

The United States is the main source of Bermuda's imports. In 2012, the United States contributed 70% of the total imported products followed by Canada (11%) and the United Kingdom (4%) (Figure 3). As the United States' share decreased from 80% of total imports in 2003 to 70% in 2012, other countries gained in their share, most significantly Canada (4% in 2003 to 11% in 2012).

Exports Peak in 2009

Bermuda exports rum and re-exports pharmaceutical products. Exports were at their highest during the period 2006 to 2009, after which exports decreased sharply. There was a 49% drop in the value of exported goods in 2010 and a further 8% reduction in 2011, however the value of exported goods in 2012 increased by 20%.

Transportation

2012 Quick Facts

- Registered road vehicles: 47,459
- Reported accidents: 1,837
- Road casualties: 960
- Road fatalities: 9

Registered Roads Vehicles Decline

The total number of registered road vehicles has fallen by 3,412 (7%) from 2009 to 2012 (Figure 1). This trend holds true for 10 out of the 15 vehicle categories. The biggest contributing factors for the decline between 2009 and 2012 were the decreases in Auxiliary Cycles, Private Cars and Motor Cycles & Scooters, respectively. Together they comprised 87% of the total decline. Auxiliary cycles have decreased partly due to closures of livery (rental) cycle businesses as a result of declining tourism arrivals. In particular, the number of tourists dropped significantly in the last year, especially for cruise passenger arrivals (see *Visitor Arrivals* Table 11.1). Coupled with declining tourism figures, Bermuda's job market has contracted due to the economic downturn. Bermudians and non-Bermudians have been affected by unemployment and some have left the island to seek opportunities elsewhere which reduced the need for registered vehicles. Alternatively, some are financially unable to license their vehicles due to job losses.

Decreasing Accidents

Reports of road traffic accidents have also declined during the past two years, by 17% (Figure 2). This decline may be due to a number of factors, such as fewer vehicles on the roads, road safety education, legislation, etc. For example, in 2010, the *Amendment to the Road Traffic Act, 1947* banned the use of cellular phones and other hand-held electronic devices while operating a motor vehicle. This law amendment may have had an impact on the lower number of reported road traffic accidents.

The highest number of road traffic accidents reported during the 11-year period was in 2004 (3,078) and the lowest was in 2012 (1,837). Historically, most of these accidents involved private cars followed by motorcycles, then trucks. Inattention and inexperience have been the leading causes of road traffic accidents since 2002 (Table 10.4). However, 2012 saw record lows in these categories for the period; inattention (547) and inexperience (201), respectively. Nevertheless, these two causes still represented 57% of all accidents in 2012. There were 9.0 fatalities as a result of traffic accidents in 2012 which is lower than the 11-year average of 10.7 (Table 10.5).

Shipping Arrivals on the Decline

From 2002 to 2012, the number of overseas shipping vessels arriving in Bermuda has decreased by 17% (Table 10.8). This decrease reflects the fewer number of yachts arriving. Although the number of vessels arriving in the Hamilton (the major sea port of entry) decreased by 5% from 2011 to 2012, more vessels still arrive there than St. George's or Dockyard.

Fewer Passengers

Table 10.9 shows the general trend of a decline in airline passengers arriving on the island since 2007. This could be due to a combination of reasons such as the global economic slowdown, the expense of visiting and staying in Bermuda, more competition from other destinations, etc. A 14% decline was recorded from 2007 to 2008, the greatest decline over the 11 year period.

Incoming Airmail Fluctuates Greatly

The weight of air cargo arriving in Bermuda has steadily fallen since 2008 by a total of 36% (Table 10.9). From 2002 to 2012, airmail coming to the island increased by 51% but fluctuated over the period. Figure 3 shows that inbound airmail had a drastic dip 2004 to 2005, then an upsurge from 2008 to 2009. Outbound airmail, however, leveled out from 2007 to 2012.

Section XI

Visitor Arrivals

2012 Quick Facts

- Total visitors: 610,325
- Air visitors: 232,063
- Cruise visitors: 378,262
- Visitors from U.S.A: 83%

Cruise Arrivals Surpass Air Arrivals Since 2006

Total visitor arrivals fluctuated over the time period 2003-2012 (Figure 1). However, there was an increase in visitor arrivals over the period of 26% and the number of visitors in 2012 was 7% higher than the ten-year average of 571,878. The number of cruise ship visitors surpassed air visitors from 2006 onwards resulting in a 67% growth over the period. In contrast, air arrivals declined by 10% over this ten-year period.

Most Visitors from the United States

In 2012, 83% of all visitors were from the United States (Figure 2). However, this share comprised 72% of air arrivals compared to 89% for cruise arrivals. Residents of Canada were the second largest contributor to total visitors, representing 8%. Nearly three times as many Canadian visitors arrived by air (13%) than cruise ship (5%).

July Most Popular Month for Visitors

Figure 3 shows that the peak visitor arrivals in 2012 were in July (17%) and the fewest visitors arrived in January (1%). The number of visitors increased each month until July, at which point arrivals decreased for the remainder of the year. Furthermore, April, September and October represented months of transition from the off-season (November-March) to the peak season (May-August).

Section XII

Weather

2012 Quick Facts

- Total rainfall: 49.27 inches
- Average air temperature: 72.0°F
- Average water temperature: 74.2°F
- Average relative humidity: 74%

Main Source of Water Supply is Rainwater

In 2008, two-thirds of water supplied to Bermuda’s residences was from rainwater¹. The remaining one-third was sourced from piped water, trucked water and private wells. The 2010 Census data indicates that 52% of households relied solely on stored tank water and 30% supplemented stored tank water with fresh water, salt water or brackish wells. As Bermuda relies heavily on rainfall to meet its water needs, the following analysis focuses on rainfall trends over the decade 2003-2012.

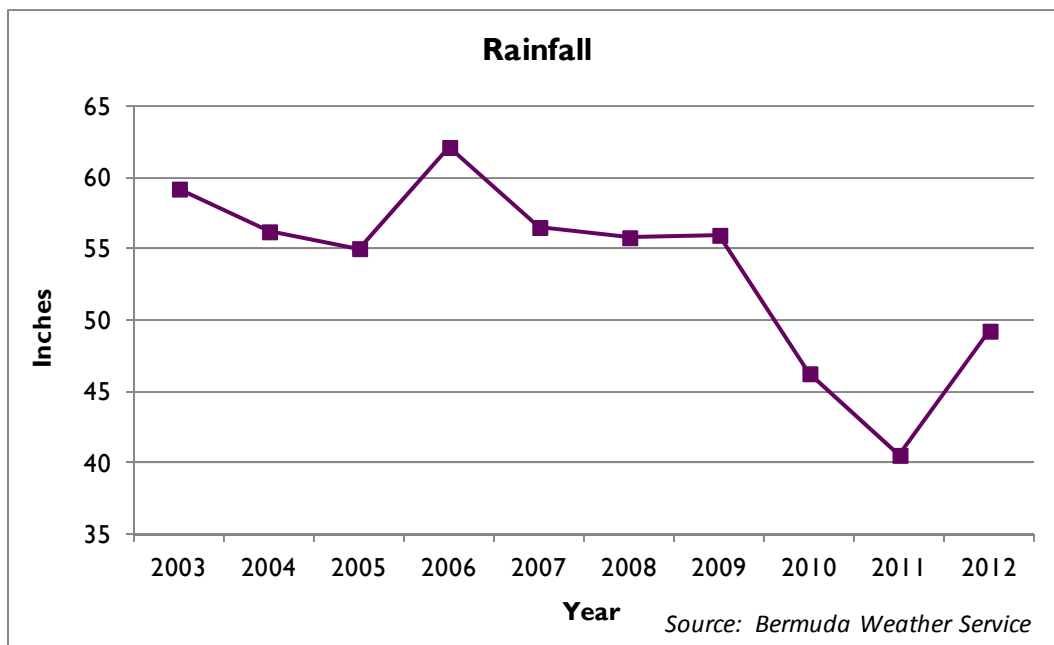

Rainfall Since 2010 Below Average

Rainfall in 2012 amounted to 49.27 inches, well below the ten-year average of 53.72 inches (Figure 1 and Table 12.1). The number of rain days in a given year does not have a bearing on the number of inches of rain. For example, there were 183 rain days in 2006 (highest year in inches) and 182 rain days in 2011 (lowest year in inches). However, despite there being only one extra rain day in 2006 than 2011, there was 21.58 inches more rain in 2006.

Most Rainfall in August; Least in December

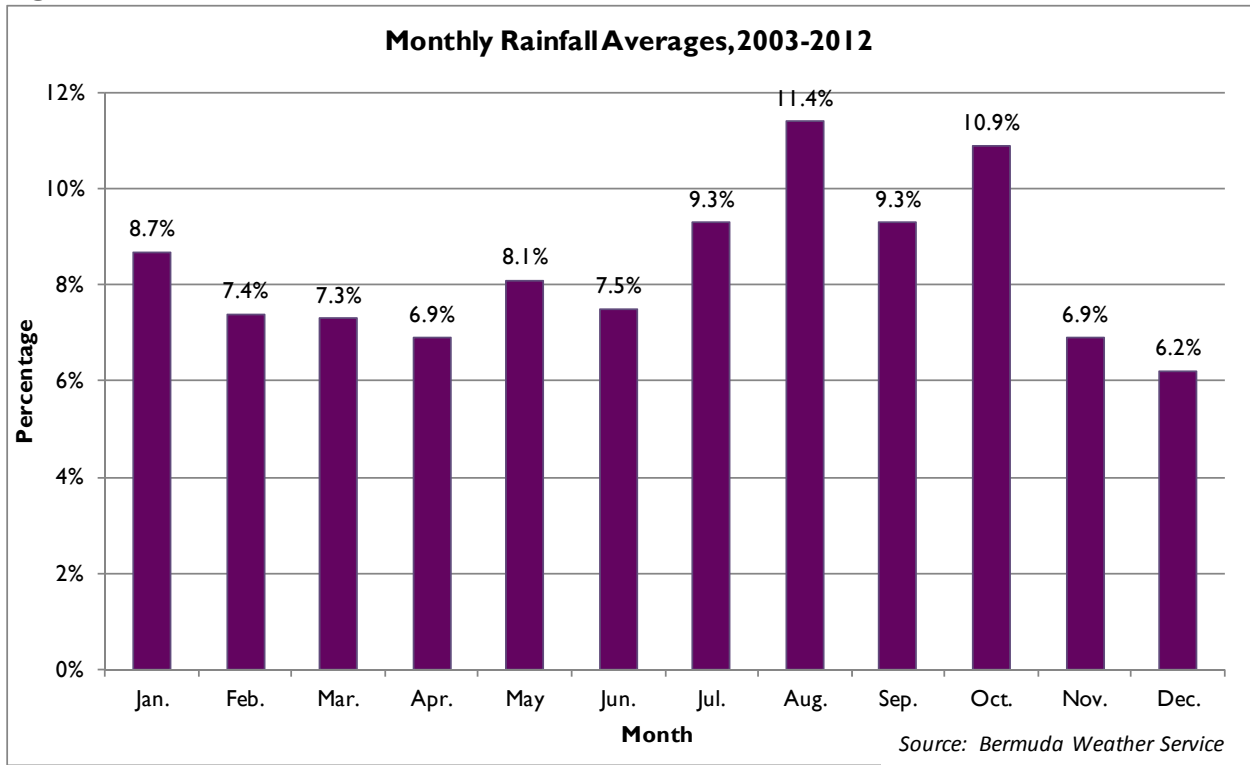

Figure 2 shows that, on average, the wettest month is August (11.4% of annual rainfall) and that December is the driest (6.2% of annual rainfall). However, 2012 deviated from this trend as September had the most rainfall (18.8% of annual rainfall) and March the least (1.6% of annual rainfall). This information can be used to plan for when additional sources of water may be required to supplement rainwater reserves.

Miscellaneous

2012 Quick Facts

- Amount of Electricity Consumed (Residential): 249.7 million kWh
- Amount of Electricity Consumed (Commercial): 307.3 million kWh
- Net Price of Electricity per kWh (Residential): 44.93 cents
- Net Price of Electricity per kWh (Commercial): 36.49 cents

Electricity Consumption Declines Post 2009

Electricity consumption in Bermuda has risen steadily from 574.7 million kilowatts (kWh) in 2002 to a record high of 656.1 million kWh in 2009 (Figure 1 and Table 13.3). After 2009, local consumption of electricity declined each year to 606.3 million kWh in 2012. According to the Ascendant Group Limited's Annual Report 2012, the amount of electricity consumed on the island declined, "As the economy of Bermuda has weakened since 2009, core electricity sales have been adversely affected. BELCO's customer base is decreasing due to the departure of the non-Bermudian labour force, as companies moved operations out of Bermuda or significantly reduced staffing."¹ The report also cited other factors contributing to the decline in electricity consumption such as customers conserving energy and therefore reducing consumption.

Gross Receipts from Electricity Consumption Fluctuates

Between 2002 and 2012, there was an increase of 87% in total gross receipts in electricity consumption. The total gross receipts were \$249.5 million in 2012 and \$133.2 million in 2002, (Figure 2). During this period, gross receipts from residential consumption of electricity increased steadily from \$50.7 million in 2002 to peak at \$72.7 million in 2010 (Table 13.4). Subsequently, gross receipts from residential consumption of electricity declined and stood at \$67.2 million in 2012. Similarly, gross receipt totals from commercial electricity consumption rose from \$58.1 million in 2002 to \$69.9 million in 2009, and declined thereafter.

Fuel Adjustment Gross Receipts Respond to Oil Prices

One of the factors that contributes to the cost of electricity is the fuel adjustment. The fuel adjustment cost is comprised of the market price of oil, transport cost, customs duty and projected usage. There has been a marked increase in fuel adjustment gross sales from \$15.5 million in 2002 to \$104.1 million in 2012 (Table 13.4). Notably, fuel adjustment gross receipts reached an all-time high in 2012. However, the largest annual increase in the fuel adjustment occurred in 2008 (+79%).

Net Price of Residential Electricity Nearly Doubles

The residential net price for electricity has nearly doubled in the last decade from 22.79 cents per kWh in 2002 to 44.93 cents per kWh in 2012 (Table 13.4 and Figure 3). In contrast, the commercial net price for electricity cost rose by 68% from 21.70 cents per kWh in 2002 to 36.49 cents per kWh in 2012. The highest commercial net price was recorded at 39.92 cents per kWh in 2011.

NOTES:

Residential 1: higher density residential development; commercial, industrial, etc. use may be permitted provided there is no loss of residential amenity.

Residential 2: lower density housing. Other uses are restricted.

Rural: tracts of open countryside and areas of rural character where very limited new development may be permitted.
